

DATASHEET

The Ambu® Silicone Face Mask is designed for use with manual and automatic resuscitators, anaesthetic circuits and ventilators.

Ambu® Silicone Face Masks feature a flexible cushion manufactured from 100 % silicone that works to establish a tight yet comfortable seal. The cushion is self-inflating, and the pressure within the cushion may be regulated (except for size 0A). A transparent dome allows for a visual check of the patient's condition, and an integrated thumb rest supports hand positioning throughout ventilation.

Ambu® Silicone Face Masks can be reprocessed up to 30 times. They are suitable for both manual and automated cleaning and sterilization, and are capable of being autoclaved at a temperature of 134 °C (except size 0A). The flexible cushion is also removable to facilitate thorough cleaning.

Ambu® Silicone Face Mask
